# Public Health Reports

Treasury Department, United States Marine-Hospital Service. Published in accordance with act of Congress approved February 15, 1893.

Vol. XIII. WASHINGTON, D. C., OCTOBER 7, 1898.

No. 40.

# UNITED STATES.

Yellow fever in the South-(Continued).

The disease continues to spread slowly, and has been reported at the following additional places since the issue of the last Report: Bowie, Delogny, Plaquemine, and St. James Parish, La., and Clinton, Fayette, Harriston, Hermanville, Madison, Port Gibson, Starkville, and Wardville, Miss.

September 28. Assistant Surgeon von Ezdorf was reported sick with yellow fever at Orwood. He is now convalescent.

Train inspection service—(Continued).

All trains on the Yazoo and Mississippi Railroad have been suspended. Inspection on the Memphis and Charleston Railroad has been extended to include the entire work; also on the Nashville, Chattanooga and St. Louis to include the greater part of that road.

Inspectors have been placed on the Louisville and Nashville Railroad from Memphis to Guthrie.

The following memorandum has been issued for the guidance of officers of the Marine-Hospital Service who are in charge of the work of supervising the disinfection of Pullman cars and day coaches which have been used to transport refugees from infected districts:

### DIRECTIONS FOR THE DISINFECTION OF RAILWAY COACHES.

I. For the day coach, dining car, tourist sleeper, parlor car.—Formaldehyd gas, applied by means of an autoclave in a 2 per cent per volume strength, the time of exposure not less than twelve hours.

96

II. For Pullman, Wagner, and other sleeping cars.—Formaldehyd gas applied by means of an autoclave at a 4 per cent per volume strength, the time of exposure not less than twelve hours. Outside of cars liable to convey infection should, after mechanical cleansing, be disinfected by (a) solutions of bichloride of mercury, 1–1000, (b) solutions of carbolic acid, 1–40, or Trikresol, 1–100.

Arrangement of the day coach for disinfection.—All openings of the car should be closed as tightly as possible, especially the ventilators; these are best closed by means of waste. All carpets along the aisle should be laid across the top of the seats. If the car is provided with sash curtains they should be pulled down and hooked over the windows. The cushions of the seats should be shoved slightly away from the backs so that all the surfaces can be reached by the gas.

Water-closets, lockers, and storeroom should be opened. All apertures to be closed with waste or some other similar material. The gas should be introduced into the car by one of two ways: By the keyhole in the car door or through the hopper of the water-closet. If the car is badly infected it is always best to give a preliminary disinfection before doing all that has been outlined in the above.

Under these conditions the car is left just as it is, apertures closed, and a strong percentage of gas thrown in and allowed to remain for at least six to eight hours before it is arranged for the final disinfection. This procedure will be sufficient to sterilize the contents and surfaces of the car and renders this arrangement less dangerous to the operator.

The immigration coach.—If the coach is constructed with a view to easy closing, the interior can be given a clearing with formaldehyd gas in not less than 2 per cent per volume strength, and after this a mechanical cleansing of the floors and water-closets to be followed by a thorough douching with a strong disinfecting solution, preferably a solution of bichloride of mercury.

Sleeping cars.—The same general rules apply to these as for the day and immigration coach. The berths must be let down, all pillows taken down from under the seats; the mattresses and pillows so arranged that all surfaces may be thoroughly exposed, curtains suspended from the curtain poles; the carpets removed from their fastenings and placed over the backs of the seats or suspended by some means in the aisle. The lockers, closets, etc., to be opened. All the articles therein to be arranged so as to be exposed to the gas. Articles of food not hermetically sealed should, after the completion of the disinfection, that is after the exposure of the goods, be destroyed.

Water tanks should be disinfected either by a solution of formaldehyd 1-2000 for two hours, or by permanganate of potash 1-20 for two hours, and afterwards thoroughly rinsed. In most cases it may be necessary to neutralize the formaldehyd gas by ammonia. This can be readily done by sprinkling a sufficient quantity on the floor of the car and

allowing it to remain about one hour; about twice the quantity of ammonia should be used for the formaldehyd solution.

Sulphur is not recommended on account of the destructive effect upon fabrics.

Precautions against the spread of yellow fever from Mexico.

September 28. Reports having been received that several persons from Tampico and Victoria where yellow fever exists, were in Nuevo Laredo, the collector of customs at Laredo, Tex., was authorized to employ guards for the bridges and ferries.

October 1. The necessity being apparent, guards were also authorized at the coal mines and in Zapata County. Yellow fever having been reported in Tamaupilas, Mexico, the collector of customs at Brownsville, Tex., was authorized to employ additional guards to enforce quarantine.

Yellow fever in the United States from July 1 to October 6, 1898.

[Reports to the Supervising Surgeon-General, United States Marine-Hospital Service.]

Smallpox at Cedarville, Ala.

MOBILE, ALA., September 29, 1898.

SIR: I have the honor to state that smallpox has existed at Cedarville, Hale County, Ala., for the past two months and that over 50 cases have occurred, principally in colored people. The local physician, Dr. McCullom, has lately recovered from the disease.

I am, very respectfully, your obedient servant,

R. D. MURRAY, Surgeon, U. S. M. H. S.

# Smallpox in Conway, Ark.

LITTLE ROCK, ARK., September 28, 1898.

SIR: I have the honor to inform you that 3 cases of smallpox have been reported in the town of Conway, Faulkner County, Ark.

Very respectfully,

L. P. GIBSON, Acting Assistant Surgeon.

# Smallpox in Detroit, Mich.

DETROIT, MICH., September 27, 1898.

SIR: I have the honor to report that there are 6 cases of smallpox in this city.

I would request that 100 vaccine points be sent to this station as soon as possible.

Respectfully, yours,

JOHN GODFREY, Surgeon, U. S. M. H. S.

G

Smallpox in the United States as reported to the Supervising Surgeon-General United States
Marine-Hospital Service, January 1 to October 7, 1898.

Reports of States and yearly and monthly reports of cities.

CALIFORNIA—San Francisco.—Month of August, 1898. Estimated population, 360,000. Total number of deaths, 359, including diphtheria, 3; enteric fever, 17; measles, 9; scarlet fever, 2; whooping cough, 1, and 47 from phthisis pulmonalis.

CONNECTICUT—New Haven.—Month of August, 1898. Estimated population, 110,000. Total number of deaths, 172, including enteric fever, 9, and 21 from phthisis pulmonalis.

Westport.—Month of September, 1898. Estimated population, 4,000. Total number of deaths, 7, including 1 from phthisis pulmonalis.

ILLINOIS—Springfield.—Two weeks ended September 26, 1898. Estimated population, 31,000. Total number of deaths, 12, including 2 from enteric fever.

MASSACHUSETTS—Worcester.—Month of August, 1898. Estimated population, 106,202. Total number of deaths, 196, including whooping cough, 5, and 20 from phthisis pulmonalis.

MICHIGAN.—Reports to the State board of health, Lansing, for the week ended September 24, 1898, from 74 observers indicate that pneumonia, intermittent fever, and enteric fever increased and cholera morbus decreased in area of prevalence. Phthisis pulmonalis was reported present at 186, enteric fever at 111, scarlet fever at 25, whooping cough at 20, diphtheria at 17, measles at 6 places, and smallpox at 1 place, Detroit.

MINNESOTA—St. Paul.—Year 1897. Estimated population, 215,582. Total number of deaths, 1,387.

Contagious and infectious diseases of St. Paul, Minn.

Of the 3,283 vaccinations made during the year, no case showed any ill result.

NEW JERSEY—Paterson.—March 1, 1897, to February 28, 1898. Estimated population, 110,288. Total number of deaths, 1,783, including

diphtheria, 86; enteric fever, 35; measles, 7; scarlet fever, 7; whooping cough, 5, and 201 from phthisis pulmonalis.

NEW YORK.—Reports to the State board of health, Albany, for the month of August, 1898, from 156 cities, towns, and villages, show a total of 11,302 deaths, including diphtheria, 124; enteric fever, 181; measles, 26; scarlet fever, 26; whooping cough, 168, and 1,019 from phthisis pulmonalis.

The Monthly Bulletin says:

For the month of August, compared with the preceding month, the annual death rate from all causes per 1,000 population has fallen from 20.60 to 20.00, and somewhat exceeds the average death rate for August of the past ten years, which has been 19.80, as well as that of August, 1897, which was 18.75. The infant mortality is but little reduced from that of July, 42.5 per cent of the deaths occurring under the age of 5 Zymotic diseases caused the same mortality as in July, 25.5 per cent of deaths from all causes. There was increase in the prevalence and distribution of typhoid fever and malarial diseases, decrease in diphtheria, scarlet fever, measles, and cerebro-spinal meningitis, and no change in that of diarrheal diseases and whooping cough. Compared with August, 1897, typhoid fever, diarrheal diseases and whooping cough are more prevalent, and diphtheria less so. The Maritime and the Lake Ontario and Western districts have a lower death rate than in July, the East Central shows no change, and the rest of the districts have increased death rates. In the Maritime district diarrheal diseases, diphtheria, and scarlet fever decreased, and typhoid fever is doubled, causing 100 deaths. Diarrheal diseases in all the other districts increased largely, causing double the mortality of July, against a decrease of 300 in the metropolis; this increase in the rural districts late in the summer is customary; for the State the mortality is the average for the month for the past ten years, being about 20.0 per cent of all deaths, all other zymotic diseases causing 5.5 per cent. Diphtheria caused 120 deaths against 159 in July, and against an average for the month of 300-the smallest mortality for one month in the past ten years. Scarlet fever fell to a mortality of 26, of which 18 were in the metropolis. Typhoid fever, as usual, has increased in all the districts; the increase is excessive in the Maritime district. Whooping cough caused 170 deaths, August being uniformly the month of its largest The epidemic of mild smallpox previously reported in the western part of this State, has appeared in the towns of Mt. Morris, Caneadea, and Alden, its spread being due to a failure to recognize it. There were not less than 14 deaths during the month from lightning stroke, occurring in rural localities. The average mean temperature for the month was 70°, which is a little above the normal; the highest recorded 92°, the lowest 40°; the rainfall was 5 inches, an excess of 11 inches; there were comparatively few clear days; southwest winds uniformly prevailed.

TEXAS—Galveston.—Month of July, 1898. Estimated population, 60,000. Total number of deaths, 55, including enteric fever, 1, and 2 from phthisis pulmonalis.

Plague was first noticed by Dr. A. G. Viegas, on September 23, 1896, but after the identity of the disease was clearly established many other medical men recognized that they had treated cases before this date, and it is probable that the disease existed in Bombay in the preceding August or July.

# Sanitary report from Rio.

RIO DE JANEIRO, September 1, 1898.

SIR: I have the honor to transmit to you the official report for the week ended August 19: There were 234 deaths from all causes, a decrease of 13 as compared with the foregoing week; 6 deaths from accesso pernicioso, an increase of 2; 11 deaths from yellow fever, an increase of 3; none of smallpox, none of diphtheria—before, 1 of each; 2 deaths from beriberi, the same as before, and 48 deaths from tuberculosis, an increase of 8.

There occurred, during the week ended August 26, 235 deaths from all causes; 4 deaths from accesso pernicioso; 7 deaths from yellow fever; 4 deaths from different fevers, and 1 death from beriberi.

Information.—In regard to the state of health in the city and harbor

of Rio de Janeiro, I have nothing especial to report.

I have recently had a chance to receive a publication concerning mortality statistics in the state of Sao Paulo. Thinking that these data may have some interest for you, I have extracted some of the most important parts thereof and prepared the inclosed tables. I have taken in especial consideration the capital of the state, the city of Sao Paulo, the port of Santos, and, moreover, I have combined the figures relating to 58 cities and other localities, which are classified in my tables under the head of "different localities."

You will find a statement of the nationality of the deceased. Another table shows the number of deaths, arranged according to various special diseases, by which they were caused. I have also prepared a table in regard to the most important infectious diseases—tuberculosis, typhoid fever, diphtheria, whooping cough, beriberi—a table which represents the number of fatal cases that occurred in the most important cities: Sao Paulo, Santos, Campinas, Sorocaba, and Rio Claro, and I have embraced in this table the last years from 1893, respectively, to 1895, in so far as the data have been obtainable.

I have refrained from copying the statements of the percentages or rates per thousand of the deaths; such figures have only importance when the number of inhabitants is in reality exactly known. The number of inhabitants of the city of Sao Paulo is estimated at 230,000, and that of Santos at 35,000; but no correct census has been taken.

In regard to the table relating to nationalties, I beg to remark, that in the state of Sao Paulo, the largest number of immigrants are Italians (a), and in the capital their number is especially large. Among foreigners, the Portuguese occupy numerically the second place, and then follow the Spaniards and Germans. The English colony in the state of Sao Paulo is quite small and there are also very few Americans.

I refrain from commenting especially on the number contained in each table, presuming, that the figures speak for themselves to the well-

informed reader.

Since last report the following-named ships have been inspected and received bills of health of this office: August 27, steamship Eastern Prince, British, for New York; steamship Kendal, British, for St. Lucia. August 30, steamship Sirius, British, for New York; steamship Rydal Hall, British, for St. Lucia; barkentine Priscilla, American, for Baltimore. August 31, steamship Hogarth, British, for New Orleans; steamship Scottish Prince, British, for New York; steamship Darlecaria, German, for New York.

Respectfully, yours,

W. HAVELBURG, M. D., Sanitary Inspector, U. S. M. H. S.

#### TURKEY.

# Bubonic plague in Djiddah.

[Report No. 200.]

CONSTANTINOPLE, September 17, 1898.

The existence of bubonic plague in Djiddah continues to be discussed. According to the official reports which the British consul forwards to the British embassy in Constantinople, bubonic plague cases do exist in Djiddah but he states he can not officially report their number. In a letter written by him to the sanitary inspector of Djiddah, which letter has been forwarded to the International Sanitary Commission and read at its last sitting, he states that he takes all the necessary steps for the disinfection of the houses where said bubonic plague cases have occurred. The above-mentioned British vice-consul, who at the same time is a physician, states that on July 12 a bubonic plague death occurred. The sanitary office of Djiddah announces that it has been forbidden in this latter town to bury without medical certificate and that no notice has been given to that office of such a death. It has been decided to make inquiry and to ascertain how the corpse of the man who died from bubonic plague was buried.

There is no sanitary news from the province of Yemen.

After a long discussion on the infectious nature of feathers and down, the International Sanitary Commission has issued the decision inclosed herewith.

The sanitary news received from the other provinces of the Turkish

Empire is good.

The Constantinople public health is satisfactory. There exist, as always, some smallpox cases as well as cases of whooping cough and other zymotic diseases, some of which have proved fatal.

During the thirteen days from August 22 to the 4th inst., 357 deaths were registered, of which 3 were from diphtheria, 8 from typhoid fever,

and 15 from smallpox.

I have the honor to forward to the Department some French copies of the mortality statistics of Constantinople during the Ottoman year 1313, that is to say, from the 1st day of March, 1897, to the last day of February, 1898, as well as a copy of the two reports on the work on the lazaretto of Camaran which is not yet finished.

SPIRIDION C. ZAVITZIANO, United States Sanitary Commissioner.

Circular telegram to health officers.

[Inclosure.]

AUGUST 31, 1898.

By decision of the superior council of health, birds' feathers and down arriving from Europe shall be given free pratique at Ottoman ports without the formality of a certificate of origin.

Dr. Cozzonis, Inspector-General.

## VENEZUELA.

# Decline of smallpox.

DEPARTMENT OF STATE. Washington, D. C., September 22, 1898.

SIR: I have the honor to inclose for your information an extract from a dispatch from our minister to Venezuela relative to the epidemic of smallpox in that Republic.

Respectfully, yours,

ALVEY A. ADEE, Acting Secretary.

Hon. SECRETARY OF THE TREASURY.

[Inclosure-No. 190.]

LEGATION OF THE UNITED STATES, Caracas, September 8, 1898.

SIR: I have the honor to report that after several months of civil strife and a widespread epidemic of smallpox, which almost paralyzed commerce by causing European steamers to shun Venezuelan ports in order to avoid rigorous and protracted quarantine at the various West Indian ports, business is improving, and confidence has been restored.

The smallpox is decreasing rapidly and within a month it will, in all probability, have entirely disappeared from the country.

I have the honor to be, sir,

FRANCIS B. LOOMIS.

Hon. SECRETARY OF STATE.

#### STATISTICAL REPORTS.

GREAT BRITAIN—England and Wales.—The deaths registered in 33 great towns in England and Wales during the week ended September 17 correspond to an annual rate of 24.6 a thousand of the aggregate population, which is estimated at 11,218,378. The highest rate was recorded in Gateshead, viz, 37.2, and the lowest in West Ham, viz, 15.1.

London.—One thousand eight hundred and thirty-two deaths were registered during the week, including measles, 8; scarlet fever, 3; diphtheria, 29; whooping cough, 35; enteric fever, 7, and diarrhea and dysentery, 397. The deaths from all causes correspond to an annual rate of 22.0 a thousand. In greater London 2,485 deaths were registered, corresponding to an annual rate of 20.2 a thousand of the population. In the "outer ring" the deaths included 11 from diphtheria, and 7 from whooping cough.

Ireland.—The average annual death rate represented by the deaths registered during the week ended September 17 in the 23 principal town districts of Ireland was 26.8 a thousand of the population. The lowest rate was recorded in Queenstown, viz, 11.7, and the highest in Ballymena, viz, 56.4 a thousand. In Dublin and suburbs 182 deaths were registered, including diphtheria, 1; enteric fever, 3; measles, 1, and whooping

Scotland.—The deaths registered in 8 principal towns during the week ended September 17 correspond to an annual rate of 18.8 a thousand of the population, which is estimated at 1,568,536. The lowest mortality was recorded in Edinburgh, viz, 16.4, and the highest in Perth, viz, 20.4

1119

a thousand. The aggregate number of deaths registered from all causes was 567, including diphtheria, 5; measles, 9; scarlet fever, 3, and whooping cough, 21.

JAMAICA—Kingston—Two weeks ended September 17, 1898. Estimated population, 34,314. Total number of deaths not reported. No deaths from contagious diseases.

NORFOLK ISLAND.—Month of July, 1898. Estimated population, 876. No deaths and no contagious diseases.
